

Paulo Miguel B. Iñigo

IT Graduate

COVER LETTER

My name is Paulo Miguel B. Iñigo, and I am 22 years old. I graduated with a Bachelor of Science in Information Technology on June 25, 2024, from Quezon City University, where I also achieved the Latin honor of Cum Laude.

Over the course of my four years at university, I gained experience in every information technology role there is, including project management, system development, web development, Network design, Network troubleshooting and hardware and software maintenance. With the use of PHP, MySQL, and JavaScript as well as I have little knowledge modern frameworks like Laravel, I have a strong preference for back-end web development and also I have knowledge in HTML, CSS, bootstrap and Java. I dedicated all of my free time to honing my back-end development coding skills, and I utilized the remainder to fix hardware and software problems on various computers in our community. This helped me become more adept at solving problems and maintaining open lines of communication with those around me. My understanding of networks and software systems has also been aided by the university.

I managed network troubleshooting for my prior employer as an IT intern. I used IP PING to verify if the network was operating correctly, Tracert to see if packets were being lost, and IPCONFIG to make sure the host address, subnetmask, and gateway were all correct. My unwavering desire to better myself has allowed me to take use of every skill my course has to offer. Nonetheless, I spend the majority of my time at our office troubleshooting computers and resolving hardware or software problems, which has helped me learn more about how to resolve various computer problems. With everything I had learned, I wanted to give my future employer everything I could.
